Abstract (en)

[origin: EP2546429A1] The present invention relates a suspended ceiling (1) comprising at least one ceiling tile (2) having a front surface (2a), a rear surface (2b) opposite the front surface (2a) and one or more edge surfaces (2c) extending between the front and rear surfaces (2a, 2b), and at least two profiles (10, 11) adapted to support said at least one ceiling tile (2), wherein at least one of said profiles (10) comprises a flange (12) and a web (13) having a bulb (14), and a fixing member (20) adapted to fixedly engage with said at least one ceiling tile (2). At least a fixing portion (21) of the fixing member (20) is adapted to be inserted into said at least one ceiling tile (2) via an edge surface (2c) of the said at least one ceiling tile (2). The fixing member (20) has a retaining portion (24) adapted for engagement with the bulb (14) from beneath relative the bulb (14). The present invention also relates to a method for dismounting a suspended ceiling (1).
