Abstract (en)

[origin: EP2546436A2] The invention concerns a door lock device for a door (30). The door lock devices comprises a first plate (51), a first lock cylinder protection (41) with a particular design and a first attachment means (64). The first lock cylinder protection (41) has such a length that it in a mounted state reaches a surface of the lock case (23) which is mounted in the door or otherwise the door lock device comprises at least one distance element (66) which reaches a surface of the lock case when the first lock cylinder protection (41) is held attached at the door with the help of the first attachment means (64). At the same time a surface (62) of the first lock cylinder protection (41) exerts a pressure force against the first plate (51) such that the first plate is held in position against the outside of the door. The invention also concerns a door (30) and a method of mounting a door lock construction.
