Abstract (en)

[origin: WO2011113842A1] The invention relates to a door panel and to a door panel and frame set, including at least two lift-off hinges in at least three parts connected by an axle, according to the so-called flush system, one surface of which is in the same plane as the door panel, in particular a metal door panel for attachment to a frame, the lift-off hinge including at least one attachment pin on the door panel side and at least two attachment pins on the frame side. The at least one pin of the lift-off hinge on the door panel side is a cylindrical pin having an outside thread which is screwed into a socket running diagonally through at least the hinge side corner of a tube within said door panel, to which said socket is attached. The at least two pins of the lift-off hinge on the frame side are capable of being attached by screwing to the inside of the frame by sockets or blocks welded or secured behind the frame.
