Abstract (en)
[origin: WO2011113716A1] The invention relates to a roller guide (1), in particular for a sliding door, comprising at least one roller (5) rotatably mounted on a carriage (4) and rolling on a floor (8) of a guide rail (3), wherein the roller (5) can be displaced from a closed position into an opening area, wherein the floor (8) of the guide rail (3) is designed so that the contact surface (11, 12) of the roller (5) on the floor (8) in the closed position is offset relative to the opening area in the axial direction of the rotary axis of the roller (5).
