Abstract (en)

[origin: WO2011113213A1] A ventilation system for window or door comprises a main frame (102), a glass-supporting sash (104), a ventilation passage (106), a lock fitting (112) and a bidirectional pivoting flap (14). The pivoting flap (14) is mounted on the sash (104) and connected to a locking mechanism (114) of the lock fitting (112). The pivoting flap (14) is adapted to pivot about a first axis (A1) between a closed position and a first open position in which the locking mechanism (114) is in an unlocked position, or about a second axis (A2) between the closed position and a second open position in which the locking mechanism (114) is in a locked position.
