Abstract (en)
[origin: WO2011113650A2] The invention relates to a reflector array antenna with crossed polarization compensation comprising at least one radiating member (20) having an engraved pattern that is dissymmetrical relative to at least one direction X and/or Y of the plane XY of the radiating member, the dissymmetry of the pattern of the radiating member being calculated individually from a radiating member having the same symmetrical pattern in the two directions X and Y so as to generate a reflected wave having a controlled depolarization opposite to a depolarization generated in a plane normal to a propagation direction by the reflector array (11) illuminated by a primary source (13).
