Abstract (en)

[origin: CA2790148A1] The invention relates to an aerosol-forming material for a hookah, which comprises a first substance and at least one second substance which is held by the first substance and which is at least partly released following activation of the aerosol-forming material, wherein the first substance comprises pores for receiving the second substance and the second substance is a fluid. Provision is made for the first substance, based on the weight thereof, to comprise at least 65 wt % of clinoptilolite.
