Abstract (en)
A folding apparatus for storing articles for display, the apparatus comprising a board of multiwall structure of polypropylene material comprising two parallel vertical folds dividing said first sheet into a back-plane part, a left side part and a right side part. The side parts being foldable by 180 degrees with respect to the back-plane. The back-plane part comprises a plurality of horizontal slots, and the side parts comprising a plurality of holes corresponding to the plurality of slots. A plurality of rods is insertable through corresponding holes in the side parts. A plurality of shelves also comprising multiwall structure of polypropylene material where each shelf rests on one of said plurality of rods and its flap inserted in a corresponding slot.
