Abstract (en)
[origin: EP2548488A2] The suction device (2) comprises a housing, which has a suction port (8) and an air outlet. A blower arrangement (6) is provided, which is retained in the housing for generating an air flow (L) from the suction port to the air outlet. A blower (18) is provided, which is connected with another blower (20) through a flow chamber. The flow chamber is formed by a receiving chamber (24), in which the blowers are arranged. An inlet opening (26) is provided, at which a suction channel (30) of the blower is connected.
