Abstract (en)  
The device has a decoiler or a reel that is pivoted at a supporting element (1). A cross-section of the decoiler or the reel is narrowed from a side that is facing the supporting element to a free end. The free end is provided as lying separated from the supporting element. One of the three poles (3,5,7) is arranged on the side portions (9,11). A tilt angle between a contour of the reel and the rotation axis of the reel is in a viewing direction facing perpendicular to the rotation axis of the reel between 0.5 degree and 5 degrees. An independent claim is included for a method for winding a hose.

Abstract (de)  
Die Erfindung betrifft eine Schlauchaufwicklungsvorrichtung mit einer an einem Stützelement (1) drehbar gelagerten Haspel, deren Querschnitt sich von einer dem Stützelement (1) zugewandten Seite zu einem von dem Stützelement (1) entfernt liegenden, freien Ende verringert und ein Verfahren zum Aufwickeln eines Schlauchs mit einer derartigen Schlauchaufwicklungsvorrichtung.
