Abstract (en)

[origin: EP2548819A1] The package (10) has an elongated package band (23) attached between the package and an outer envelope (11). The package band is corroded when removing the outer envelope by co-operation of the outer envelope to a tear strip (19). The package band is separated when removing the outer envelope and/or operating the tear strip such that sections (24, 25) of the package band are adhered on a film of the outer envelope and/or on the tear strip based on connection at the package. The package band is arranged transverse to a wear strip. An independent claim is also included for a method for manufacturing a package.
