Abstract (en)

[origin: WO2011115013A1] A method for adjusting the curl of coated paper, which includes a process for applying coating to one side of a web (W) to be conveyed, and drying the coating with a dryer, and a process for applying the coating to the other side of the web, and drying the coating with the dryer so as to be provided at the time of producing the coated paper formed by applying the coating to the one side and the other side of the web, wherein, in the heating temperature in a last dryer (6B4) through which the web to which the last coating has been applied at the time of producing the coated paper passes, a heating temperature to a reverse coated surface (Wa) of the web to which the last coating has not been applied is set lower than a heating temperature to a coated surface (Wb) of the web to which the last coating has been applied.
