Abstract (en)
[origin: EP2549040A1] The structure (1) has a running rail (3) for guiding a sliding door, and a diaphragm (5) for partial optical covering of the running rail. The running rail comprises grooves (11, 13) extended in a longitudinal direction of the running rail. The diaphragm comprises a flange (23) with a rib (25) extended in a longitudinal direction of the diaphragm. The rib is engaged with one of the grooves, and a fastening element (27) e.g. self-tapping screw, is secured in the groove, in a mounted state of the diaphragm. The fastening element defines the diaphragm at the running rail. The running rail and/or the diaphragm are designed as extruded profiles.
