Abstract (en)

[origin: EP2549049A2] The component has inner and outer casings (1) that are connected together to form a component core. Sliding elements (3) at periphery of casings are attached to the core. The sliding elements are arranged in the guide receptacles of the component core, and are vertically adjustable in the adjacent edges of the inner and outer casings. The sliding elements in the guide receptacles are reset to the middle positions by using elastic spring elements. The inner and outer casings are made of metal, plastic, glass, timber and other similar materials.
