Abstract (en)

[origin: EP2549211A1] The cooling device has a body (1) and a door (2), which limits a storage chamber (4). A cooling goods carrier is pivotally mounted at the door around an axis. The axis is fixed with respect to the cooling goods carrier and the door. The cooling goods carrier is pivoted from a horizontal use position upward in a non-use position adjacent to the door. The cooling goods carrier is lockable in the non-use position. A latch, which fixes the cooling goods carrier in the non-use position, is movable for unlocking in direction of the axis.
