Abstract (en)

[origin: EP2549384A1] CPUs acquire for each of the CPUs, a measured speed of access to a shared memory via an acquiring unit. The CPUs calculate for each of the CPUs response performance of the CPU from the measured access speed and a theoretical access speed for the CPU via a response performance calculating unit. Another CPU calculates ratios of access rights of the plurality of CPUs to the shared memory via an access ratio calculating unit such that a ratio of an access right of a CPU is larger than a ratio of an access right of another CPU whose response performance is higher than that of the CPU. The other CPU notifies an arbiter circuit of the ratios of the access rights calculated, via a notifying unit.
