Abstract (en)

The invention proposes a wireless communication antenna device (10) comprising: a base element (12); at least one antenna unit (14) mounted on one side (16) of the base element (12), the antenna unit (14) comprising an antenna structure (18) and a transceiver and/or amplifier device; and at least one heat transfer element (26) assigned to the antenna unit (14) and extending from said assigned antenna unit (14) to the base element (12) being part of a heat sink (28) or to a heat sink (28) located on the opposite side of the base element. The invention further proposes a corresponding method for heat dissipation in a wireless communication antenna device (10).
