Abstract (en)

[origin: WO2011116916A1] The invention relates to an interior lighting system for a motor vehicle, having a light guide (LL), having at least one light source (LQ1, LQ2) which is designed and arranged in such a way that light from the light source is coupled into the light guide at one end of the light guide, and having a control device (FRM), which is coupled to a motor vehicle system bus (BUS), for controlling the light source in such a way that the light from the light source is changed as a function of bus data relating to colour and/or brightness which is transmitted via the system bus.
