Abstract (en)
[origin: WO2011116829A1] The invention relates to a construction safety screen (100), comprising a net structure (102), which net structure (102) comprises a net (103), a front horizontal tube (105) located at a front edge of the net (103) and a rear horizontal tube (104) located at a rear edge of the net (103). An attachment arrangement (101) connects the construction safety screen (100) to a construction. The attachment arrangement (101) comprises a net hanger comprising a U-shaped portion. The rear horizontal tube (104) of the net structure (102) is accommodated in said U-shaped portion at a distance from a short side of the net structure (102) such that the rear horizontal tube (104) protrudes from both sides of the U-shaped portion. Alternatively, the net hanger of the attachment arrangement may be replaced by an adjustable net coupling part clamping the rear horizontal tube.
