Abstract (en)

[origin: US2011239142A1] An approach is presented for providing content over multiple displays. A display manager causes, at least in part, presentation of a first content on a first display. The display manager then receives an input for activating one or more second displays. The display manager selects a second content based, at least in part, on the first content and the input, and causes, at least in part, presentation of the second content on the one or more second displays.
