Abstract (en)
[origin: ES2390688A1] Cooking countertop device, cooking hob and control procedure of said cooking hob. The invention is based on a cooking hob device, in particular an induction cooking hob device, with at least one connection element (10; 10a), and at least one control unit (12; 12a); which induces the connection element (10; 10a) in at least one operating process to establish and interrupt an electrical contact determined in a periodically essentially periodic manner with a primitive period (14). To achieve an effective construction mode, it is proposed that the control unit (12; 12a) induce the connecting element (10; 10a) in the operating process to establish contact at least twice within the primitive period (14). .
