Abstract (en)
A tool positioning pad includes a pad 1 having a plurality of position holes 11 and at least one block unit 2 detachably connected to the position holes 11. The tool bits are positioned via the position holes 11 and the handles are positioned via the block unit 2 so that the tool positioning pad can position not only the tool bits but also the handles. Therefore, when the users need multiple handles, the users do not need to take an added bag inconveniently for receiving the handles.
