Abstract (en)

[origin: EP2551215A1] The method involves providing a pocket that is open on one side, and filling the pocket by a metering device. The pocket is attached to a valve (3a) by welding the pocket on a lower tube (3c) of the valve, where a body (31) of the valve projects from the pocket. The valve is assembled with a cover (4a) for closing a refillable diffuser housing by a lower part of the cover. The valve is secured to a cup (32) with a pressing contour (35), where product characteristics are printed on the pocket and/or a label is bonded on the pocket before filling the pocket. An independent claim is also included for a recharging device for a rechargeable diffuser housing.
