Abstract (en)

[origin: EP2551426A1] The structure has a set of half-hoops (2), each comprising lower and upper sections (3, 4) divided into branches separated from each other toward distal ends of the branches and isolately maintained so as to form upper and lower arches (5, 6). Spacers (7) are placed between connection plates according to rotation axes (A1-A4) so as to isolately maintain the half-hoops. Each of the lower sections is prolonged in lower part by a retaining element retaining lower ends relative to each other at deployed state, where the lower sections form a base of the reinforcement to rest on the ground. An independent claim is also included for a tent.
