Abstract (en)
[origin: EP2551436A1] The connecting web (1) has a main portion that is provided with a web-like profile portion (5) and an associated insulating element which is set in original form. A foam material shaped portion (6) made of polyurethane is compressed at room temperature in compressed state. The foam material shaped portion is returned to original shape by heating the foam material shaped portion. Independent claims are included for the following: (1) a composite structure; and (2) a method for manufacturing composite section.
