Abstract (en)

[origin: WO2011120997A1] The hereby invention is about a baking mold system (0) for the making of a bread-type preparation (37) comprising at least two parts, one concave, the other one convex, the convex part (2) being inserted into the concave part (1) following a longitudinal axis, a space made between the two parts determining the shape of the bread-type preparation (37). The concave and convex parts are made out of plastic material and comprise at least one air vent arranged through the convex part (2) in order to have the space made by both parts and the utilization space of the mold system communicate. The invention is also about a machine using the mold system (0) and the use of the mold system (0).
