Abstract (en)

[origin: WO2011124816A1] The present invention relates to a device for closing and fastening two lengths of flexible strapping, particularly two end sections (15a, 15b) of flexible strapping forming a belt, the end sections being fitted with securing means. According to the invention, the securing means (1) comprise an end loop (2) to be fixed to a first length of strapping (15a), and a lateral loop (3) to engage with a second length of strapping (15b) which is to engage with the two loops (2, 3) during closing and fastening operations by being successively introduced, starting from the lateral loop (3), through the rear opening (9) in the lateral loop (3) and the front opening (8) in the same lateral loop (3) so that the second length of strapping (15b) is folded into an overall S-shape having three superposed parts (15b1, 15b2, and 15b3).
