Abstract (en)

[origin: WO2011120668A1] The invention relates to an attachment for a dental suction device having a branching section (4) and a connection opening (3) for connecting to the suction device, and having two ends (12, 13) providing suction during use, of which a first end (13) is designed for receiving a suction part (6) for spot-suctioning and for keeping the tongue away, wherein according to the invention the second end (12) has a hook-shaped curve (8) to which an end section (9) extending transverse or diagonally to the plane of the curve (8) is connected by means of at least one opening (10).
