Abstract (en)  
[origin: WO2011124785A1] The invention relates to a binding (1) for a boot (3) on a ski (2) including a front abutment (300, 300b), a connection member (200, 200b) having a front end which is secured to the ski (2), and a rear end, the connection member being provided with a hooking means (203, 204), a rear base (100) to be attached to the ski (2) and a hooking mechanism (600, 600b) combined with the rear base (100). The hooking mechanism (600, 600b) includes a gripping member (601, 602, 603) which is movable with respect to the rear base (100) and which can be moved into a first position in which engages with the hooking means (203, 204) of the connection member (200, 200b) in such a manner as to limit a vertical movement of the rear end of the connection member (200, 200b), and a first return member (650) exerting a force on the gripping member (601) in such manner as to move the latter towards the front abutment (300, 300b). The binding also includes a heelpiece (700) connected to the rear portion (205) of the connection member (200, 200b). The longitudinal position of the heelpiece (700) is adjustable with respect to the connection member.
