Abstract (en)

[origin: WO2011124344A1] According to the method, a small amount is branched off from the treatment liquid to be reused as a sample, and only said sample is measured in regard to the concentration of at least one treatment additive still present in the treatment liquid used. Before the measurement, only a small part of the treatment liquid to be reused must be filtered as a sample. Only a relatively small filter is required for this purpose. The sample containing only a small amount of treatment liquid can be measured in an easier and more reliable manner.
