Abstract (en)

[origin: WO2011121232A2] The invention relates to a method of manufacturing an elongate insert intended to be integrated by CIC in a metal container, comprising coated yarns bonded together, said coated yarns being formed from metal-coated ceramic fibres. The method is characterized in that it consists in placing the coated yarns side by side in a bundle and in pulling the fibre bundle through a shaping element so as to compact it transversely while forming it so as to have a defined cross section. The invention also relates to the manufacture of a metal part incorporating a fibrous insert by the CIC technique.
