Abstract (en)
[origin: WO2011120519A2] In a safety body belt, having a harness that can be placed on the upper body of a person and comprises at least one belt-like main belt, and having two safety lines which each extend from the front side of the harness to a free end, a hook-like or eye-like fastening element being provided at each free end, and each safety line having a rewind device which attempts to roll up the safety line under spring loading, the invention proposes that the rewind devices be designed such that said device can be locked manually in such a way that, when in the locked position, the length of the safety line projecting out of the rewind device is fixed.
