Abstract (en)

[origin: WO2011121550A1] The present invention relates to a household appliance comprising a standby switch (10) adapted to take a first standby position, in which it breaks the current flow on a power supply line in order to place the household appliance into standby mode, and a second position, in which the household appliance is operational, a sensor (8) adapted to detect an event which may be associated with a fault of the household appliance, characterised in that it comprises wake-up means (6,11,14) operating when the household appliance is in standby and adapted to bring said standby switch (10) into said second position when said sensor (8) detects said event.
