Abstract (en)

[origin: WO2011131191A1] The invention includes a method and a U-profile (6) shaped item for tightening of roofing underlay (2), which is mounted below roof overlay (7) in roof constructions (1) for buildings. The U-profile (6) shaped roofing underlay tighteners are mounted to battens (4,5), which separate roofing underlay (2) and roof overlay (7) without application of aids such as mounting fittings, strips or tools. The U-profile (6) shaped roofing underlay tighteners are inexpensive to produce, quick and simple to mount and long-lasting.
