Abstract (en)

[origin: WO2011150994A2] The application is based on the surprising finding that proteins regulated by increased c- myc activity in the liver can be used as body fluid markers and/or as tissue biomarkers in the diagnosis, prognosis and/or treatment monitoring of cancer and dysplasia, in particular of liver cell dysplasia and hepatocellular carcinoma (HCC), and wherein the proteins are selected from a first group consisting of Polymeric immunoglobulin receptor, Phosphatidylinositol-glycan-specific phospholipase D, Alpha-fetoprotein, Antithrombin 3, Apolipoprotein E, Apolipoprotein M, Fibrinogen beta-chain, Haptoglobin, Paraoxonase 1, Retinol binding protein, Serum amyloid P-component, Transthyretin, or from a second group consisting of Afamin, Glutathione peroxidase 3, Hemopexin, Major urinary protein, Serine protease inhibitor A3K. Consequently, medical uses of said proteins, of corresponding compositions, of corresponding antibodies, of corresponding siRNA and of corresponding nucleotide sequences are claimed. Also claimed are corresponding kits and corresponding methods and procedures.
