Abstract (en)

[origin: WO2011123131A1] A method, system, and apparatus for scoring an intellectual property asset, such as a patent. A platform for automated scoring can implement a z-score statistical method, or variations thereof, to score a patent. The z-score statistical method can be used to measure where a value of a parameter in a patent lies in relation to the average value of that parameter in a patent population. Parameter scores can be obtained for each parameter of the patent. Additionally, a composite score can be provided that indicates an overall score or value of the patent, at least with respect to the parameters examined, as against the patent population. The composite score can be a weighted score of the z-scores of different parameters of the patent.
