Abstract (en)

The turbine has rotor (5) with several blades that are rotatably mounted within inner casing (3). The inner casing has inner housing end region (33) formed around thrust balance piston (4). A seal (27) is arranged between inner housing end region and outer housing, to separate third pressure chamber (29). A feed channel (16) is provided between thrust balance piston and inner casing, to connect first pressure chamber (15) to thrust input piston chamber (12). A connection (32) is provided to fluidically connect third pressure chamber of inner casing with the thrust input piston chamber.

Abstract (de)

Die Erfindung betrifft eine Kühlung für eine Dampfturbine (1), die im Bereich der Ventilanbindung (40) einen Kühlkanal (37) vorsieht, der mit einem Kühldampf aus dem Strömungskanal (9) beströmt und anschließend als Kühldampf im Bereich des Schubausgleichskolben (4) zugeführt wird.
