Abstract (en)
[origin: EP2555111A1] A signaling display method and a signaling display system are disclosed, wherein the method includes: a conversion module converts a signaling structure represented in a first language into a structure class represented in a second language; a signaling tracing background configures a corresponding relationship between a structure class and a key value, and objectifies the structure class and the key value to be a class object; and when a key value in a received signaling is determined to be matched with the class object, the received signaling is displayed as a tree structure according to the class object. A structure construction method, a structure field assignment method and a tree structure display method are further preset in the structure class. By using the method and the system, a structure relationship in a signaling is shown clearly, thus facilitating problem positioning.
