Abstract (en)
Disclosed is a currency transfer system comprising a cashier machine (13), a change machine (12), and a conveyor cassette (16) detachable to both the cashier machine and the change machine, for storing bills conveyed from the change machine to the cashier machine, further comprising an identification unit (23) on the change machine side, for identifying a bill denomination and normal and defective bills; an information creation unit (45) on the change machine side, for creating storage breakdown information to manage bill denominations and normal and defective bills, for each bill stored in the conveyor cassette, based on the identification unit identification results; and a recognition unit (76) on the cashier machine side, for recognizing the bill denomination and normal and defective bills for each currency stored in the conveyor cassette, based on the storage breakdown information, when storage breakdown information is obtained. This greatly reduces processing loads associated with bill identification at the cashier machine.
