Abstract (en)  
[origin: EP2555254A2] The system (10) has an open foot gap formed in a lower region of a mounting side between a flat roof (20) and an attached photovoltaic module unit (16). Another open foot gap is formed in a lower region of a back side between the roof and a wind deflector. A perpendicular projection part of each gap is provided onto an imaginary plane, which is oriented perpendicular to the roof for defining a rectangular area larger than another area. Upper edges of the wind deflector and the module unit are arranged in another imaginary plane, which is oriented parallel to the flat roof.
