Abstract (en)

[origin: EP2555329A1] The terminal (10) has a screw connection arrangement (12) comprising a screw fastening part (16) with a shaft (16b) that carries an external thread (17) and is screwed into another screw fastening part (14) in screw fastening direction. Both the screw fastening parts are formed from an electrical conductive material. A connector (22) of an electrical connecting conductor is releasably clamped between a screw head (16a) and the latter screw fastening part, and the conductor is connected with a voltage source. An electric machine-side terminal lead (20) is connected to the latter part. The screw fastening parts are designed as a sleeve nut and a screw bolt, respectively.
