Abstract (en)
[origin: WO2012072583A1] The invention relates to an ejection device, in particular for a pull-out guide, comprising an activation element (26), which can be moved along a guide unit (10), and a detent mechanism, by means of which the activation element (26) can be latched to the guide unit (10) against the force of at least one energy accumulator (2), wherein the detent mechanism comprises a rotatably mounted control element (30, 30'), wherein a rotational axis of the control element (30, 30') is oriented inclined to the direction of movement of the activation element relative to the guide unit (10), and in a closed position the control element (30, 30') is seated with a stop (36) against a holder (3).
