Abstract (en)
[origin: CA2793384A1] A support frame to be laid on a pair of cross-members (16) of a rack has at least two U-section rails (12) and a plurality of C-section rails (11) running transversely thereto, of which the flanges (14) are joined to the central webs of the U-section rails (12). The distance between the U-section rails (12) of the support frame is dimensioned such that said rails fit exactly between the two cross-members (16) of the storage rack. The central webs of the C-section rails (11) are perforated, wherein at least some of the holes (17) have rims (18) projecting from the surface of the C-section rails (11), which faces away from the U-section rails (12).
