Abstract (en)

[origin: WO2011124444A2] The invention relates to a refrigerator (10) having an interior compartment (12) and an exterior door (14) which provides thermal insulation. Said invention is distinguished in that an intermediate door (20), which is transparent at least in regions, is provided between the interior compartment (12) and the exterior door (14), said intermediate door being designed to provide less thermal insulation than the exterior door (14), preferably to provide no thermal insulation, but to at least largely prevent air escaping from the interior compartment (12).
