Abstract (en)
[origin: EP2556864A2] The ski or snowboard has multilayer sliding board bodies (3) comprising strength-related upper and lower box sections (5, 6) and a strip-like core element (7). The core element is limited by flat sides (16, 17) and lateral leg surfaces (18, 19). The flat sides of the core element are closely attached with base sides (20, 22) comparatively longer and shorter in a cross section to the upper and lower box sections, respectively. A filling- and adhesive agent (28) is provided on a modified polyurethane system with two-component mixture of polyols and isocyanates. Independent claims are also included for the following: (1) a method for manufacturing a prefabricated semi-finished product (2) a semi-finished product for manufacturing ski or snowboard (3) a method for manufacturing a sliding board body.
