Abstract (en)
[origin: EP2556898A2] The element (11) has a discharge end (14) formed at an end of the element, where the end is turned toward a connection (12) e.g. screw connection or bayonet connection, for a neck of a two-component cartouche. A transit channel is guided from the connection to the neck to the discharge end. A stripping device (20) is provided for the neck, and comprises a stripping edge (18) for a front end of the neck. The stripping edge corresponds to a shape of the front end of the neck. The stripping edge runs approximately parallel to a longitudinal axis of the element.
