Abstract (en)

[origin: EP2557235A2] The equipment (1) has loading opening (2) for retaining an item in a loading space, and a connection device (4) for connecting the equipment with a tractor front loader, a telehoist load lugger (5), a wheeled loader and a farm loader. A cleaning apparatus (6) is movably arranged at a side of the equipment, where the side faces the loading opening. A limiting unit limits mobility of the cleaning apparatus that extends over entire width of the equipment. The cleaning apparatus is arranged in front of a wheel of the front loader, the load lugger, the wheeled loader and the farm loader. The cleaning apparatus is designed as a broom, a cleaning blade, a rubber lip or a rotary brush. An independent claim is also included for a method for retaining bulk material using an accessory equipment.
