Abstract (en)
The method involves associating hinge elements of an interior panel with a hinge element (6B) of a frame, so that the panel is pivotingly assembled with respect to the frame. The panel is maintained in a position corresponding to an open position of a door. Another panel is associated to the former panel by sliding movement of the latter panel with respect to the former panel, so that the latter panel is maintained in position with respect to the former panel. The panels are secured to each other by a connection unit after position of the panels is adapted. An independent claim is also included for a kit for forming a security access door.

Abstract (fr)
Porte blindée comportant au moins : - un panneau de porte intérieur dont un bord latéral vertical est associé à une série d'éléments de charnière adaptés pour coopérer respectivement avec un élément de la série d'éléments de charnière d'un cadre, - un panneau de porte extérieur, - des moyens de liaison pour attacher les panneaux intérieur et extérieur entre eux, et - éventuellement un matériau de remplissage destiné à remplir une ou des chambres
