Abstract (en)
[origin: WO2011127976A1] The invention relates to a steam-cleaning device having a housing (12) on which a liquid tank (24) is releasably held and in which an electrically heatable steam boiler (28) is arranged for generating steam which can be applied to a surface to be cleaned. In order to develop the steam-cleaning device in such a way that the liquid tank can be fastened to the housing and released from the housing in a simple manner, it is proposed according to the invention that the housing has a guide part (42) on which the liquid tank (24) is displaceably held, wherein the guide part and the liquid tank are connected to one another in a form-fitting manner.
