Abstract (en)

[origin: WO2011128534A1] The invention relates to a device (11) for connecting a window washer fluid dispensing pipe (7) positioned at the rear gasket (9) of a bonnet and allowing the window washer fluid to cross the sealing barrier without impairing the effectiveness thereof. To do that, the connecting device (11) has a body of a shape that complements the indentation (23) of the bonnet lining (3) through which a pipe (21) passes and a planar bearing surface (15) designed to engage with the gasket (9).
